🧠 Profile Summary

➢ 12 Year of work experience in Core Java, Data structures and Algorithm, JSP, Servlet, Struts2.X, Hibernate4.X, Webservices (REST), Spring (4.x) MVC, Spring Boot, PL/SQL, GIT 2.40.

➢ Deployed two times at client site in United States of America for 50 days, each visit.

➢ Sound working knowledge on web Application development, data migration and maintenance life cycle process.

➢ Application performance tuning.

➢ Sound knowledge in Oracle 19c Relational Database.

➢ Have been working and delivering projects using scrum methodology in Agile framework.

➢ Have sound working experience in project planning, resource and release management.

➢ **Current profile**: Working as **Senior Technical Project Manager with SBI card** since June22.
Responsibilities: Requirement discussion with business, feasibility analysis, get FSD signed-off, get dev team involved for development, tracking of project, before release to UAT verify the changes as per FSD, getting business sign-off, release planning to production, pvt sign-off, KPI publishing, resource management and effective communication with business till project closure.

➢ **Previous profiles:**

1. Worked with Aithent Technologies from June 2014 to May 2022 as Sr. software engineer.
2. Worked at IBM on payroll of Synnova Innovative Technologies pvt. Ltd. From Feb 2014 to May2014 as Software Engineer.
3. Worked with BLC Private Limited as a Software Engineer from August-2010 to March-2013.

Achievements and Metrices

1. **Aithent Technologies**:
   Received recognition and appreciation from CEO and client for delivering before time and bug free projects for three years in a row.
2. **SBI card**:
   Received reward from senior management for delivering bug free production releases.
   Delivered projects to increase revenue by 3% and process automation that reduces human effort by 25%.
   Delivering RBI mandates and Govt. regulatory in compact timelines.

Core Competencies

➢ JDK8, Data Structures and Algorithm, Hibernate4.XSpring(4.x), Spring MVC, Spring Boot, Microservices, Angular JS, Ajax, JQuery, XML, REST, SOAP Webservices

➢ Oracle 19c, MySQL5.X, Postgres9.1, Tomcat9.0, JBoss6, wildfly10.

➢ Project planning and resource management

💼 Work Experience

Project Name	**Sales24 and WCP**
Role	Senior Project Manager As a PM, requirement gathering, project planning, resource allocation and release management are part of the role.
Vendor	TCS
Platform/Server	Apache webservers, weblogic, Linux
Database Language & Tools	Oracle 19c Java1.8, Hibernate4.x, Spring Boot, Microservices, Angular14, Eclipse, SQL developer.
Description	Sales24 is sourcing software in banking to capture the applicant personal, KYC and surrogate details. This uses blaze decision engine to process applications. WCP is processing software for details captured physically / digitally in Sales24. This uses NBSM decision engine and basis card gets approve in the system and assigned to next system for card generation. Both systems uses multiple third party softwares like blaze, NBSM, NSDL, Fuse, GGI, Spine, Vision+, Cardone which makes a cluster to achieve end to end application processing and card generation.

Project Name	**CHNC Data Import/Export**
Role	Development and client handling
Client	CHNC
Duration	June21- Ongoing
Platform/Server	Windows
Database Language & Tools	Oracle19c,JDK1.8,Eclipse
Description	Functionality is to import data into database using external files(csv) which is an alternate way to insert data into system instead of application patient and forms. Likewise data export is used to export data in csv format for patient and forms. Two schedulers have been implemented to handle both functionalities.

Project Name	**IBM Merge**
Role	Development and client handling
Client	IBM
Duration	Dec 19 to April20
Platform/Server	Windows
Database	MSSQL Server, Oracle19c
Language & Tools	
Description	ProHealth,Parkland and SUNY, clients have MSSQL db and data needs to be imported in oracle db.Old application fields mapped with new application and same done at db side.Prepared queries to extract data from MSSQL and written PL/SQL to insert data into oracle db

Project Name	**CHNC**
Role	Client handling, requirement gathering, handling team of 3-5 members and development.
Client	CHNC
Duration	June2017 – till date
Platform/Server	Windows, Linux
Database Language & Tools	MSSQL, Oracle 12c, java script/jQuery and JBoss app server
Description	Data Migration: Legacy data from MSSQL server needs to be migrated to Oracle 12c since client stopped using old system. Merged legacy data with current data. Currently project is in support phase Annual Changes: JS code changes done to meet requirements of consortium of 35 hospitals. Each hospital has different set of requirement.

Project Name	**eResearch**
Role	Java Developer, client handling Web services implementation, Issue fixing, database script writing(data migration) and client interaction.
Client	WCG, U.S.
Duration	Ongoing. working on this project since May2016
Platform/Server	Linux
Database Language & Tools	Core java, Data structures and Algorithm, JSP, servlet, EJB,Hibernate,Spring, Oracle 12c
Description	Velos eResearch is the most comprehensive and adaptable clinical research management suite (CRMS) available for automating all administrative, financial, and research activities. Designed to promote productivity and efficiency, Velos eResearch simplifies the management of the entire clinical research portfolio by linking study status, patient enrollment, calendars, budgets, electronic data capture and more.

Project Name	**Emtrax – Garuda**
Role	Java Developer Development,handling change request and client interaction.
Client	Velos Inc, California, U.S.
Duration	Jan 23, 2012-April-2016
Platform/Server	Linux
Database	Core java, Data structure,Struts 2, Hibernate 3.0, Oracle 11g

Language & Tools	
Description	Emtrax-Garuda provide an online platform for maintaining the Product Fulfillment and Clinical Data Repository (CDR) System,that is electronic medical record system which is integral to conducting many of the process transactions that support bone marrow and umbilical cord blood transplants between donors and patients, developed for NMDP(National Marrow Donor Program). A bone marrow or cord blood transplant can be used to treat patients with life-threatening blood, immune system or genetic disorders. As many as 10,000 patients may benefit from an unrelated transplant each year in the United States alone. Through its Be The Match Registry®, the NMDP provides transplant centers and patients access to more than 9 million potential donors and 185,000 cord blood units, as wellas donors and cord blood units listed on international registries.

Project Name	**Selfcare**
Role	Java Developer Develop modules of Manhattan according to CBR in core java. Developed Hotpack and Budgetpack services.
Client	Airtel
Duration	Feb2014 to May 2014.
Platform/Server	Windows XP.
Database Language & Tools	Java,Data structure,RAD, WAS, XML.
Description	Selfcare is dealing with Airtel prepaid customers. At airtel.in "My Account" link is meant for prepaid customers. Customer can View his last five transactions, special offers, 3G plans, my plans, service request like postpaid customers.

Project Name	**SMART SEARCH**
Role	Java Developer I am handling this project with 2 team members. I am responsible for development of user interface, admin panel and Search engine required for this project. I am also responsible for gathering the requirement from client.
Client	RCM Aeroservices Ltd.
Duration	January 2012 to March 2013
Platform/Server	Apache Tomcat 6.0, Windows XP, Linux (fedora 12), Centos 4.5
Database Language & Tools	Java, Data Structures, Struts2.0, Ajax, jQuery, Oracle 10g, MySQL 5.1, Eclipse
Description	SMART SEARCH: This project is Airline domain specific. Based on 'Remarks', 'Reason Of Interruption' and 'Corrective Action' it generates new ATA Code for the problem. The search engine uses Lucene API and Regular Expression for searching. Phase–I of this application is completed. It's a part of the analysis process used in the MATBI (reporting tool). The development of this application is ongoing. Development/coding parts involved the use of struts2.0. UI is designed on the JSP with struts2.0 tags and jQuery. Backend involves the use of Mysql5.1 and Oracle10g.

Project Name	**MAT- BI**
Role	Java Developer As a team member I worked on 'Admin Panel', Fusion Chart integration and 'Exported Reports' modules. I am also responsible to test the application and fix the bugs.
Client	RCM Aeroservices Ltd.

Duration	March 2010 to January2012.
Platform/Server	Apache Tomcat 6.0, Windows XP, Linux (fedora 12), Centos 4.5
Database Language & Tools	MySQL 5.0, Oracle 10g Java, Struts2.0, Hibernate3.0, Spring, AJAX, Java Script / HTML, Eclipse, Dreamweaver, XML.
Description	MAT BI is business intelligence and reporting tool, uses Mondrian analysis service. The project have following layers :: Mondrian OLAP server. MAT engine – MAT Engine takes the data from OLAP server and creates the data format for fusion charts. MAT Engine communicates with OLAP server and presentation layer. Presentation layer- presentation layer covers fusion chart, report and drill down table and Dashboard.

Education

B.Tech. [I.T.] from UPTU ,2009.
