LIVE PROJECTS

QR Code Menu for Small Restaurants | Build Something Useful

- Small Restaurants and street food stalls can not afford QR Menu. Code Menu Apps are expensive for small Restaurants. Build a simple menu QR for small Restaurants or street food stalls. Vendor can create their menu and generate QR. Customer can register and get discount. Vendor can track how many customer are returning. send sms for update regarding offers etc
- TechStack:HTML,CSS,Javascript,Reactjs,Expressjs,Node.js,Bootstrap,Mongodb,use UI and UX to Deploy GitHub.

Bank Of India - GST [Hubnex Labs]

- It is a digital loan processing application from the Bank of India that gives loans to companies to pay their taxes. My role was to build the complete frontend and Backend of the project as well as a CBS layer to ensure the smooth functionality of the project in a bank environment.
- The tech involved in the project was Java, java8, Html,CSS,Java script,React,Mongodb, angular, and Postgres .
- This project involves XML, FIXML, and RestFul architecture apis due to the wide functionality and integration of several third-party policies.
- Tech Stack: Javascript,Html,CSS,React and Use to Data Base Mongodb.GitHub

Warehouse Management System[GoodPick Technologies Pvt. Ltd.]

- A management system based on multi-tenancy, focusing on storing products in various warehouse systems. Products undergo quality and quantity checks before dispatching to the requested delivery order place.
- Designed complete ERP interface microservice from scratch.
- API integration through Frontend, fixing bugs.
- Managed incoming and outgoing data from SAP through API.
- Fixed various bugs and issues in other services.
- Technology/Tools: Html,CSS,Javascript, React, MongoDB,Expressjs,Bootstrap.GitHub

Asite Works - A cloud storage platform [Sharechat]

- It was an online cloud storage platform having a special functionality of version controlling just like a git.
- In this platform, we can store files and even work on them simultaneously with other employee resources giving a real-time change of content to each other.
- My task was to implement the complete login-logout and signin-signout functionality for the project.
- Also involved in bug fixing and code optimization
- Tech Stack:Reactjs,Javascript,Java,java8,Spring Boot,Mongodb,Big Table,Google Cloud Platform,Cloud storage,Microservices,Spring Security.

Developer Student Clubs Solution

- I had created college a Developer Student clubs website where any type of clubs member can work online.A admin security page to clubs website portal.
- Tech Stack: Javascript,html,CSS,React and Use to data base Mongodb.GitHub

ACHIEVEMENTS

Meta— Secured global rank 288th AIR 86th in Facebook Hacker Cup 2021 Round 1.Link

Microsoft-Microsoft Global Hackathon 2023.A Good Achievement.Link

CERTIFICATES

Full Stack Developer Terening Issued By Solar Secure Solution.

Web Development: Issued By Johns Hopkig University(COURSERA)
