## EXPERIENCE

### AgBe Technology Solutions Pvt Ltd — *Software Engineer*

- In this company I am working as a Software Engineer (Quality Analyst).
- I also gave KT to the new comers and they all are under me.
- Also have sound knowledge as a Backend Developer and involved in a client meeting.
- Hands on experience to create Database Schemas and testing Microservices in projects.

## EDUCATION

### Greater Noida Institute Of Technology (AKTU):

- ( July 2018 - July 2022 )
- B.Tech in Information Technology

### N.N Mohan Public School, Intermediate:

- ( April 2018 )

### Air Force School Station Hindan, High School:

- ( April 2016 )

## SKILLS

- Skilled manual and automation software testing engineer with one year of practical testing experience, adept in test case design, execution, and defect tracking. Proven capability in identifying and documenting software bugs, collaborating with cross-functional teams, and enhancing overall product quality.

## LANGUAGES

### Manual Testing:

- Showcased adeptness in manual testing methodologies, encompassing test case formulation, execution, and comprehensive defect tracking.
- Applied experience to pinpoint and communicate software anomalies, ensuring the dependability and superior quality of software solutions.
- Facilitated seamless collaboration with cross-functional teams, contributing significantly to elevating product quality and enhancing user experience.
- Developed and maintained detailed test documentation, including test plans, test scripts, and test reports, to provide clear insights into the testing process and results.
- Systematically analyzed software requirements, identified risks, and designed test scenarios, ensuring robust and reliable software.

## PROJECTS

### TVS project:

As a manual and automation tester for TVS project for the mobile and web application, my primary focus is on testing key functionalities such as user registration, authentication, profile and garage management, service handling, appointment booking, billing, notifications, communication, performance, security, usability, accessibility, data integrity, offline mode, and regression testing. The objective is to meticulously validate these components to ensure a dependable system that empowers mechanics and improves service quality for a better client experience.

### TVSIB project:

As a manual and automation tester for the TVSIB project, my role is to rigorously test the Private Garage Mechanic Management Mobile App and Web Application. I specifically focus on ensuring smooth functionality in features like user registration, authentication, profile management, garage operations, service functionalities, and communication features. Through detailed testing, I aim to guarantee a reliable platform for private garage operations, emphasizing its seamless performance and scalability across diverse international markets.

### AGRICTOOLS project:

As a dedicated manual tester for the AGRICTOOLS project, my role revolves around ensuring the quality and reliability of both the Mobile App and Web Application. I meticulously test every aspect of the applications, striving to identify and address potential issues. By focusing on thorough testing, I play a crucial part in delivering a high-quality solution that empowers farmers with a user-friendly platform to overcome agricultural challenges efficiently.

### SALES DOCKET BUSINESS INTELLIGENCE project:

In my role as a manual tester, I dedicated my efforts to a detailed examination of the user interface and frontend functionalities within the comprehensive system. My responsibilities included conducting meticulous tests on dynamic dashboards, with a dual focus on visual aesthetics and functional robustness. Through this hands-on testing approach, I played a pivotal role in optimizing the system's overall performance and pinpointing potential usability challenges. By addressing these aspects, I contributed significantly to crafting a seamless and user-intuitive experience, elevating the overall quality and effectiveness of the system for end-users.

### Automation Testing:

- Acquired proficiency in using Selenium, a widely-used automation tool, to automate interactions with web applications.
- Developed automation scripts using the Python programming language, demonstrating coding skills to create effective and efficient test scenarios.
- Utilized XPath and CSS selectors to locate and interact with web elements, demonstrating a strong understanding of web page structure and identification.
- Applied automation skills specifically to test web applications, ensuring functionalities work as intended across different browsers.
- Demonstrated an ability to learn quickly and adapt to new tools, technologies, and methodologies in the dynamic field of test automation.

### Languages:

- Versatile skilled in Manual Testing, Automation Testing, Unit Testing, Selenium, Pytest, Django Rest Framework, Python, SQL, MySQL, HTML, CSS, Bootstrap, Jupyter Notebook, Anaconda, VS Code, and Angular, with hands-on experience in database design, microservices architecture, and creating responsive user interfaces.

### Database Management:

- Proficient in managing databases, including PostgreSQL (Pg Admin-4), MySQL (PHP Admin), and Azure DB.

### Project Management:

- Experienced in using Jira and Bitbucket for efficient project management and version control.

### Development Tools:

- Skilled in utilizing Jupyter Notebook, Anaconda, VS Code, and other Python IDEs for effective development.

**Operating System:**

- Comfortable working on the Windows operating system.

**APPRECIATION**

- In current company I selected as a Software Engineer Trainee with 3 months of unpaid training but when I got confirmed as per my performance they appreciated by the one month of Appreciation salary.
- After 2 months of confirmation I also received the appreciation amount which is doubled the salary of mine.
