Selenium, TestNG, Maven, Agile, Scrum, Java, MySQL, GitLab, Git, JIRA, Postman, Confluence, Extent Report, IntelliJ IDEA, Eclipse

WORK EXPERIENCE

Senior Quality Engineer, CloudKeeper Pvt Ltd, Noida   **Feb 2021 - Present**

Project : Cloudonomic

CloudKeeper by TO THE NEW, cloud spend optimization solution that guarantees to cut down your AWS Bills by 5 - 15%. With CloudKeeper, we have helped 400+ of our customers optimize their AWS spend with a guaranteed reduction in their AWS Bills without any commitments, costs.

- Implemented **Test-Driven Development (TDD)** and **Page Object Model (POM)** design patterns to create scalable and maintainable automation suites using Selenium WebDriver for web-based platforms.
- Designed and implemented **data-driven testing** methodologies to validate application functionality across diverse datasets, ensuring robustness and accuracy in various use-case scenarios.
- Collaborated closely with stakeholders to analyze test requirements, achieving comprehensive test coverage that aligns with business objectives and user needs.
- Updated test requirements documentation to ensure accuracy, consistency and traceability across all testing procedures.
- Authored detailed test cases, test plans, and test results, enabling parallel execution and generating comprehensive test reports.
- **Led team demonstrations**, managed version control, and handled release-based build versioning, facilitating smooth and timely project deliveries.
- Performed **end-to-end functional testing** by integrating automated scripts with manual validation for complex workflows, promoting seamless user experience and adherence to quality standards across all application modules.
- Conducted **regression testing** across multiple application builds, verifying the stability and integrity of the software before production deployment.
