## Projects

---

### **Banking System**

Developed an online banking system using JavaScript, HTML, and CSS, enabling users to create accounts and perform banking transactions. Implemented responsive design and secure authentication.

### **Landing Page**

This project appears to be a simple website template for a fitness gym. Overall, this project combines HTML, CSS, and JavaScript to create a functional and visually appealing website template for a fitness gym. It provides essential information to users and encourages them to engage further with the gym's services.

### **Nimbus**

Developed a network monitoring and management platform that enables real-time tracking of device status, performance analytics, alarm management, and configuration provisioning across multiple organizations and branches. The platform offers features such as device up/down monitoring, real-time alerts, visual network mapping, and log management, ensuring efficient troubleshooting and optimized network performance.
