May 2022 to Present

### Full Stack Developer at Antvert Software Solution LLP

1. Developing and maintaining web applications: - Building and implementing features on the front-end using Angular. - Developing server-side logic and APIs using C# and .NET Core. - Working with databases like MS SQL Server and writing SQL queries. - Integrating different components and third-party libraries. - Ensuring cross-browser compatibility and responsiveness of the application

---

## PROJECTS

### NMC School Management System

NMC school management system is web based applications which is completely responsive which can be accessed by students and faculty. it's completely intra net based application so not visible for external users.its can be accessed only there network or premises.  
Purpose of the School Management System: - The School Management System is designed to automate and streamline various administrative and academic processes within a school or educational institution. - It aims to centralize information, improve efficiency, and provide a user-friendly interface for teachers, students, parents, and administrators. Key Functionality: - User Authentication and Authorization: Implementing secure login and access control for different user types (admin, teacher, student, parent). - Data Validation and Verification: Ensuring the accuracy and integrity of data entered by users. - Integration of APIs: Integrating external APIs for features like SMS notifications, email alerts, or payment gateways. - Responsive Design: Developing a user-friendly and responsive interface to support various devices and screen sizes. - Data Backup and Recovery: Implementing mechanisms to backup and restore the database to prevent data loss.
