Percentage: 90%

## PROJECTS

### Time tracking dashboard [<https://time-tracking-dashboard-henna.vercel.app/>] [<https://github.com/deepak31098/Time-tracking-dashboard>]

A react based project using axios to fetch data in react app and use of CSS grid to style the component to have responsive design. Changing states based on user input by the use of event listener

### Tip calculator [[tip-calculator-git-master-deepak31098.vercel.app](https://tip-calculator-git-master-deepak31098.vercel.app/)] [<https://github.com/deepak31098/tip-calculator>]

A React based project which uses props and states hence creating the component which can perform basic mathematical calculation on the basis of user input by handling event. For styling, Global styles and Styled components have been used in which props can be passed to tailor the component according to specific use case.

### Advice generator [[advice-generator-app-35zn-git-master-deepak31098.vercel.app](https://advice-generator-app-35zn-git-master-deepak31098.vercel.app/)] [<https://github.com/deepak31098/advice-generator-app>]

A javascript based project, which uses third party API to fetch the data. Handling the promises using then and catch. Finally, manipulating DOM to reflect the received data.

### Intro component [<https://intro-component-with-signup-form-nfzo-git-master-deepak31098.vercel.app/>] [<https://github.com/deepak31098/intro-component-with-signup-form>]

A javascript based project which uses HTML forms. This project simulates the client-side form validation in which the entered data from user should pass certain checks before sending it to server side.

### Social proof section [<https://social-proof-section-git-master-deepak31098.vercel.app/>][<https://github.com/deepak31098/social-proof-section->]

A project on responsive design to enhance user experience.
