

Sheetal Devi

Summary

I worked as a java developer for 1.2 years, which included a 6-month training period. Throughout my journey, I utilized Core Java, Java 8, Spring Boot, PostgreSQL, Git, and Postman for my tasks. I successfully completed an assignment during my training period, which led to my onboarding. After that, I worked on 3 working projects. Afterwards, I acquired a great deal of knowledge, which bolstered my confidence, and I learned how challenges can be tackled.

Work Experience

Anviam Solutions Pvt Limited (August 2022 - Oct 2023)

Jr. Software Developer

1. Library Management System

LMS an API for managing login and registration forms in a library management system. This API designed to handle data related to both admin and user roles. In this, had to work on the functionality related to books, authors, and users in this project. Created different classes for each of them and then integrated them together.

- Worked on the Registration Page and Login form.
- Learn uses of Thyme leaf.
- Write and implement efficient code.
- Create the Rest API's and Using spring boot and spring Security

2. HRM

Using the final Response and creating Rest API. This was the company's internal project. In (HRM), we were tasked with handling employees' details, including their leaves, salary, and personal information.

- Using the final Response and creating Rest API.
- Makes the different packages like: Service, Controller, Repository, Error Handling.
- learn how to handle the exception, how to add the loggers.
- Learn how to test the APIs on postman.

3. Right Move

Rightmove was a scraping project. In this, scraped postal area's wise data, max and min bedrooms, property types, property sub type, full address, agent address, agent phone number, links, phone number, postcode, In code etc.

- In this I scraped the data from the website using Jsoup library, Json, and Selenium java, Made the Repo classes, added the filters.
- Managing the data, running the project.
- Saving the data in the database.

4. FCM 360

FCM 360 Data Management project to efficiently manage large volumes of records using an Excel datasheet as the data source. Automation routines for data deduplication and transformation

- Designed a user-friendly interface for searching, and updating records. Implemented.
- Key responsibilities included data, storage, and management.
- Ensured data security through authentication, access control, and encryption measures

Skills & Abilities

- **Programming languages:** Java 8, Git, Rest APIs, Core Java, DSA, JSON, JPA
- **Libraries/Frameworks:** Spring Boot, Spring Security, Thyme leaf
- **Tools / Platforms:** IntelliJ Idea
- **Source Control Systems:** Git
- **Operating Systems:** Windows 11
- **Databases:** MySQL, PostgreSQL

Education

MSc. Information Technology

Adarsh Bhartiya College Pathankot
July 2019 - July 2021

BSc. Information Technology

Adarsh Bhartiya College Pathankot
July 2016 - May 2019

Senior Secondary (Non-Medical)

Govt. Sen. Sec. School Mohtli, HP
April 2015 - March 2016
