Proximus is the largest telecommunications company in Belgium. Proximus offers a wide line of products and mobile telecommunications services to its residential and professional customers, therefore having the largest HSDPA coverage in Belgium.

### **Electronic Database and Information Management System, 304 Days**

Electronic Database and Information Management System (EDIMS) is a web and mobile based system which facilitates users to view, validate, store and analyze consumer/connection information for every household with other relevant reference datasets. System will help in analyzing the electrification connections under the CDM project, and power consumption of different service providers. It gives access to consumer/connection data and various report generation mechanism to help REA / Govt. of Uganda to track the overall status of electrification and make respective decisions. The solution proposed by RMSI has two components: 'Mobile Application' facilitates users to capture spatial data of Consumers, Connection and Multimedia related to the connection and synchronization of collected data to EDIMS centralized server at REA. 'Web Application' will be used to manage roles, users detail and also to review/verify/approve collected data by Field Technician.

### **Nigerian Mineral Resources Decision Support System, 276 Days**

Main features of this assignment to develop a web Decision support system for Ministry of Mines to suggest the best suited sites (Mines occurrence) for mining purpose based on different criteria like Mineral Occurrence, Infrastructure, Social factors like poverty etc., Mining lease holding etc.

### **Alabama Power EDGEX Economic Development Geospatial Engine eXtended, 153 Days**

Main features of this assignment to develop a web Decision support system for Alabama power to suggest their client the best suited sites (real states) for development or establishment purpose based on requirements like Man power, Infrastructure, Transportation, companies etc.

### **Land Record Information Management System (LRIMS), 1005 Days**

LRIMS is web based solution to maintain the information related to land and owner/tenant of the land in Nepal. This system has been built to simplify and improve the task of the maintaining the land records and managing transactions related to land. The new system facilitates: 1) Management, recording and retrieval of Land, Owner and Tenant information. 2) Management of land transactions in different processes. 3) Management of Processes by managing workflow, user access and role access on these. 4) Management of taxes and fees for different processes.
