Live Projects:-

1.**Project Name**:- Decode-home

Live Url:-decodehome.com

Technologies Used:- React js ,D3,Node Js

Roles & Responsibilites:-
 I worked as Lead Developer in this project and was assigned to manage the whole website as a front-end
developer.

  Description:-

As a Lead Developer for the decode-home project, my role is to implement design and develop software systems that support the management and operation of the community. This includes a range of sites and platforms that facilitate the adding properties as owner and add the tenant of their properties managing leasing and rental agreements, tracking community amenities and services, and supporting communication between residents and management.One critical aspect of my work is designing and implementing a comprehensive property management system that enables efficient tracking of maintenance requests, scheduling of inspections, and managing expenses related to property management. This system would also provide residents with an easy-to-use portal to submit requests and report any issues related to their property.

2.
