## PROJECTS

### Content Management System (CMS)

During my tenure as a Java developer at jiffy software solutions Pvt Ltd, I had the privilege to work on a challenging project that involved creating a comprehensive Content Management System (CMS) using Spring Boot, Thymeleaf, and MySQL. The project aimed to streamline content creation, organization, and management for our clients, enabling them to efficiently manage their digital assets.

### My Role:

As a key member of the development team, I was deeply involved in the design, development, and implementation phases of the project. I played a vital role in both frontend and backend development, ensuring seamless integration between different components of the system.

### **Asterisk based OBD project**

During my time as a software developer at jiffy software solutions Pvt Ltd, I had the opportunity to work on an exciting project that involved integrating Java Spring Boot, Thymeleaf, and Asterisk to create a robust system for managing advertisement calls. The project aimed to streamline the process of initiating outgoing calls for advertisement campaigns .

My Role :

As a member of the development team, I was responsible for designing and implementing various components of the project, including the web interface, call scheduling, integration with Asterisk Api , and database management.
