PROJECTS

Psydro

Front end developer

Responsibilities:

- Developed the Html for the layouts.
- Responsive web designs, custom UI components.

Tools: visual studio code, Html5, Css3, sass

Nicol and co

Front end developer

Nicol&Co initially built on WordPress, later it was moved to GATSBYJS. It's a property listing website. I was one of the core team members of this project. Challenge was to give admin to build the site in CMS with live preview. In CMS we created Gutenberg modules to allow admin to build site. Admin can control almost everything from CMS itself. We explored and did many rounds of POC to create this framework. Same react components are used in CMS and on frontend.

Responsibilities:

- Converted designs into wordpress custom gutenberg blocks using ReactJS
- worked on Gatsby (ReactJS) components with graphql.

Tools: visual studio code, Html5, Css3, Gatsby(ReactJS), sass
