PROJECTS

1. #Travelling Agency

Role: Software Engineer
Technology: React JS, GIT, Core PHP, Laravel, MySQL, HTML, CSS, Cloudinary

Project Description:
This project having three applications:
1. Web application (V 0.1): It developed in Core PHP and using MySQL for database.
2. Web application (V 0.2): after successfully released of core PHP web application. Client required revamping the web application in to **React JS**. So, I developed it in **React JS** and used the **Redux** and **hooks** in this application. React JS web application used Laravel for backend.

3. Mobile application: Mobile Application used backend in Laravel and front-end in React Native. Front-end is handle by Laravel APIs.

- Worked on to implemented SendGrid to send email for this application.
- Also implemented google calendar to add events in google calendar using google console APIs.
- Worked on to implemented google contact APIs to import google contact list to send invitation to join application.
- Worked as a **Full-stack** developer and created APIs in Laravel and also implemented in react JS application.
- Worked on to both create core **PHP web application** (V 0.1) as single resource for backend and also worked on to **React JS web application** (V 0.2).
- Using **GIT** to share the code of the application with client.
- Implemented Cloudinary to store all images in cloud server.
- Attend Weekly client call to demonstrate work process and understand the client feedback and requirements to better understanding for project.

2. #ERP solutions

Description: School ERP solutions for school management. In today's date 29 clients using this software. it was developed in PHP CodeIgniter, MySQL is using for database and also used the **GIT**. I also worked on UI part using **HTML, CSS, JavaScript, jQuery**.

3. #E-learning Portal

Role: Senior Software Developer
Technology: React JS, Laravel, MySQL, HTML, CSS, AWS

Project Description:
In this project, Front-end is handled in React JS and backend is handled in Laravel Framework. I used Laravel V-9 for this project.

- Worked on to implemented Stripe payment Gateway for this application.
- Also implemented Zoom APIs to create any event.
- Implemented AWS S3 bucket and smtp service for mailing functionality.
- Worked on to implemented full calendar to display events.
- Using **SVN** for this application.
- Attend Weekly client call to demonstrate work process and understand the client feedback and requirements to better understanding for project.
